

### “Smart logistics” RFID-Equipment for production logistics”

Werner Bärwald, Stephan Baumann, Torsten Fuss, Reiner Keil, Christian Leitzke and Klaus Richter

**Abstract** – Innovative data collection technologies such as RFID have proved their practicability and economic efficiency in the fields of trade and stock-keeping, but for the use in the manufacturing industry, however, a number of further uncertainties have to be taken into account. Within the framework of the Sm@rt Logistics project both factors shall be proved in the field of production logistics of a metal-working company. The project and main concepts will be introduced in the article.
